Online Bookstore Analysis using SQL

Project Summary

❖ Project Details:

Tools Used: MySQL Workbench

Project Type: Self

Data Source: Kaggle.com

❖ Project Overview:

This project focuses on analysing transactional data from an online bookstore to generate insights into customer behaviour, sales performance, and inventory management using SQL.

Its goal is to enable data-driven decision-making while demonstrating the practical application of SQL in a real-world business context.

❖ Dataset Contains:

- Books - Book_ID, Title, Author, Genre, Published_Year, Price, Stock
- Customers - Customer_ID, Name, Email, Phone, City, Country
- Orders - Order_ID, Customer_ID, Book_ID, Order_Date, Quantity, Total_Amount

❖ Key Insights:

- The bookstore achieved total revenue of $75,443.27, reflecting solid sales performance.
- 442 customers spent more than $30, with many of them located in urban areas, indicating stronger demand in city markets.
- "Kim Turner" is the highest-spending customer, contributing $1,398.90 in total purchases.
- "Robust Tangible Hardware" was identified as the most frequently ordered book, highlighting its popularity among customers.
- One book is currently out of stock, emphasizing the importance of effective inventory planning and restocking.
- 138 customers placed repeat orders, showing strong potential for loyalty and customer retention initiatives.

❖ Recommendations:

- Run localized promotions in high-value cities, to better target areas with strong spending potential.

- Highlight bestselling books and premium Fantasy titles through strategic promotions and featured placements.
- Implement a loyalty program for repeat customers to strengthen customer retention and drive repeat purchases.
- Ensure timely restocking of popular and out-of-stock titles to avoid missed sales opportunities.

❖ Skills Applied

- Writing basic to advanced SQL queries for data analysis.
- Using JOINs, GROUP BY, and aggregate functions to combine and summarize data.
- Extracting business insights from raw datasets to support decision-making.
- Creating a project presentation in Microsoft PowerPoint.
